Removal of ticks

From a medical perspective, ticks should ideally be removed as soon as possible after the bite occurs. Assistance is generally available for this.

If we discover a tick on your child while they are at school, attending school events or on school excursions, we will arrange for this to be removed immediately. We will advise you if a tick has been removed.

While teaching staff are authorised to remove ticks, they cannot be required to do so. The relevant tick-removal procedure must be arranged with the school.

If injuries occur while the teaching staff are removing a tick, your child will be covered by insurance through Unfallkasse Sachsen.

We need your consent in order to remove ticks from your child.

I/We consent to the teaching staff removing ticks:

☐ Yes ☐ No

The following procedure is agreed to in the event of a tick bite:

- ☐ Possible removal by teaching staff, if the parents have consented to this
- ☐ Immediately informing guardians
- ☐ Appointment with doctor
- ☐ Other arrangements:

Once the ticks have been removed, we also ask you to monitor your child for the following reactions:

- Inflammation around bite site
- Inflamed red spots on the body
- General malaise

If any of these reactions occur, please take your child to a doctor.
